- ✔ Customise alerts with your branding
- ✔ Include audible alerts
- ✔ Support for clickable URLs within alerts
- ✔ Schedule alerts in advance
- ✔ Central reporting and tracking
- ✔ Manage config via Active Directory
- ✔ Plus much more!

NetSupport Notify is a simple, low-cost, one-way alerting and mass notification tool that enables an administratorto communicate instantly with desktop users or unattended public information displays across any size or type of organisation.

Save time

NetSupport Notify allows messages and alerts to be delivered instantly to all computer users while removing the potential delays experienced with emails entering an already busy in-box. The messages can't be skipped or ignored, saving precious time in the case of more urgent alerts. Routine alerts can also be pre-scheduled to occur on a daily, weekly or monthly basis at any given time.

Boost security

Site administrators and security personnel can use NetSupport Notify to send emergency alerts and notifications to users efficiently. With its notification gateway component, a single message can be delivered to staff across many sites or locations in a single action, again with full delivery/receipt logging and reporting.

Reliable communication

NetSupport Notify provides a welcome backup for existing technology failures (such as e-mail), and an effective tool for delivering staff alerts and guidance such as "The mail server will be off at 5pm" or "We are experiencing difficulties with our file server".
