NetSupport School

Version 15
Now available!

Classroom Management

for education and training

Scan here to learn more!

Key features

- New user interface plus new and enhanced features with version 15
- Graded user modes for teachers
- Real-time instruction tools
- Student screen monitoring
- Testing and assessment tools
- Language Lab module
- Internet and application metering
- Digital journals of lesson content
- Teacher, TA and Student apps
- File/folder collection and distribution
- Teacher and student screen sharing
- Virtual whiteboard
- Lock and blank students' screens
- Student feedback mode
- Reset students' system passwords
- Plus much more!

NetSupport School is our award-winning, market-leading classroom software solution. It supports teachers with a wealth of dedicated assessment, monitoring, collaboration and control features to boost student engagement and learning outcomes.

Instruct and demonstrate

Real-time instruction

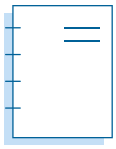
Show your screen or a student's screen to the rest of the class, broadcast video files and replay files (previous screen recordings), and even leave a recording of your 'Show' on the student's PC for future review.

Interact audibly with students while demonstrating a topic and deliver presentations optimised for wired/wireless classrooms and more, to keep learning interactive and engaging.

Screen highlighter and virtual whiteboard

Enjoy a wealth of screen annotation tools to aid in presenting. Includes line tools, arrows, shapes, text highlighters and more. Use these with the integrated virtual whiteboard to encourage collaboration within the classroom.

Student Journal



All useful and appropriate items relating to a lesson can be captured and automatically included in a PDF for students to access and review post-lesson.

Group leaders

A nominated student can be assigned certain tutor rights and act as a group leader until such privileges are revoked.

Chat

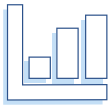
Open a chat discussion that all or selected students can join, enter their comments and share with the rest of the class.

Monitor and control

Monitor students' screens

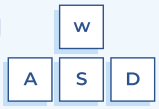
Monitor students' screens (even dual monitors) in a single view, overlay additional information (including active application or active website) and more, to monitor progress and engagement.

Internet metering and control



Monitor all students' internet usage and even view background websites open on all PCs. Allow/restrict access to specific websites, open and close websites on selected PCs and more, to help keep students on task.

Real-time keyboard monitoring



During a lesson, while all students are working using any approved application, the teacher can monitor the entire class and see quickly and easily their typed content and activity levels. There are also "target" keywords for tracking understanding and a full history of keyboard usage by student and application.

Real-time audio monitoring

Ideally suited for the modern foreign languages classroom, listen to and monitor students' audio, record audio to file or simply chat or engage with each student individually without disrupting the lesson.

Tutor and Tutor Assistant apps

Install the free Windows 10 Tutor app on Windows tablets and touch-enabled devices to access classroom and Office 365 apps, integrate with OneDrive for sharing classroom resources, and more. Plus, the free Tutor Assistant app (Apple iOS and Android devices only) enables teachers to control and monitor all students' workstations while moving around the classroom.

Manage

Connections

Flexible range of connection methods to student devices, including SIS integration (ClassLink OneRoster and Google Classroom).

User modes

Teachers can choose from three user modes (Easy, Intermediate and Advanced) to make features accessible to suit their level of edtech confidence.

Classroom management

Power on/off all or selected devices (even those not logged on) and log in/log out all classroom devices. Lock and blank students' screens, reset students' system passwords without IT support, use layouts (so the teacher's PC represents the layout of the physical classroom) and print out student registers with custom icons for each student – for easy classroom management.

Student feedback

Teachers can choose between several visual options to gauge feedback from the students, helping to capture how they feel, their confidence in a topic and whether they need extra support.

Printer and device management

Prevent students from printing in the classroom and limit printer use by number of pages. Manage USB devices, disable webcams and more, for extra security.

Hand out and collect work

Easily distribute files and folders to students' devices and collect back at the end of the lesson – saving time and effort!

Test and assess

Student surveys

NetSupport School allows a tutor to create surveys using pre-supplied or custom responses. The tutor can also instantly see all student responses and a summary of the class – great for a quick-fire poll.

Student testing and quiz

Create quizzes to test their knowledge quickly and easily. Use up to 9 different question styles, auto-mark the test results, deliver the results back to individual students/the class – and so much more!

Question and Answer (Q&A) Module

The Q&A Module allows a teacher to verbally ask questions to the class as well as award points to individuals and/or teams. Options include:

First to answer
The teacher can choose the 'top x' fastest responders and the quickest student is asked for their answer. If incorrect, you can bounce it to the next student.

Enter an answer
The teacher enters the answer to a question in advance and students are prompted for their responses.

Pot luck and team modes
Students can be selected at random to answer, or team play can be introduced.

Peer assessment
Students give feedback to their classmate's response, i.e. they indicate if the answer given was correct or incorrect.

Tech Console

NetSupport School also provides a comprehensive “Tech Console” specifically for school IT technicians to ensure devices are managed and maintained so they are always available for teaching.

Using the Tech Console, you can:

Monitor school devices, monitor and apply application and internet restrictions that are “always on”, access a full hardware and software inventory summary for a selected PC (including hotfixes), conduct a chat with one or multiple students or teachers – plus, use remote control, power management and more, to maximise school technology.

Security

NetSupport School contains a wealth of security features to ensure its correct and authorised use. These include:

- A unique security key to make your copy incompatible with other copies.
- Restricted connectivity to only systems carrying a matching software licence.
- Use AD profiles to limit which users are able to use the tutor or tech tools.
- Use AD profiles to force configurations for both tutor and student.
- Control the access and use of portable media devices within the classroom.
- Plus much more!
