

Multi-platform remote control

Gather **inventory**, even interact with active services and processes.

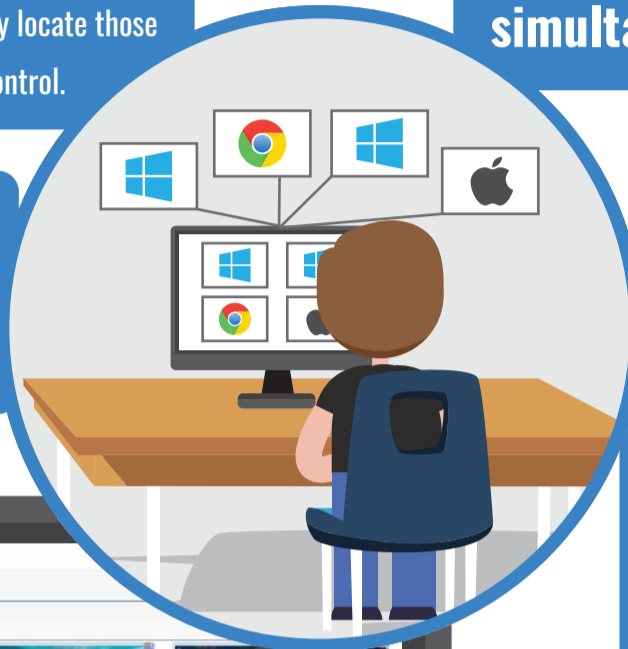

Execute **PowerShell** commands at a selected Windows Client via the PowerShell window.

Send a **Wake-on-LAN** Windows command to powered down machines - and quickly locate those local to the Control.

Group devices by OS, type, department and location.

Connect to and remote control **multiple devices simultaneously**.

Support any number of **remote users or servers** across your network.

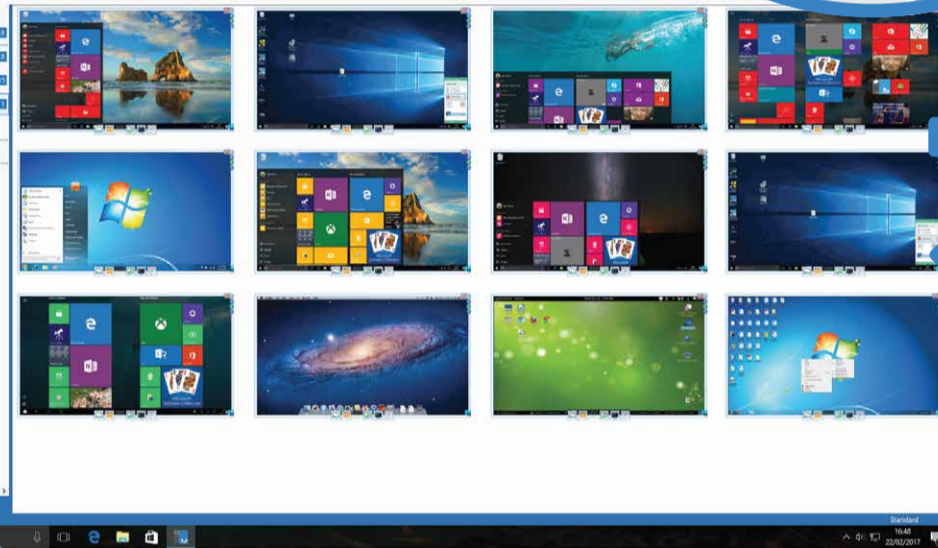

See **larger views**.

NetSupport technology is used on over **17 million** devices worldwide.

Send and collect files to one or multiple PCs in a single action.

Use NetSupport Manager from an **iOS or Android smartphone** locally over IP or remotely over HTTP.

Use **NetSupport Manager on the go** to provide support, gather system inventory, chat with users – and more.

Not just for LAN: you can access devices from anywhere with our **HTTP Gateway module** that any organisation can deploy.

Market-leading security: encryption, security keys, smart card support and full AD integration.

Full range of **supporting admin tools**.

Remote control, annotate and **record any session** for future playback. Show your screen in real time to others as a **training tool**.
