

Communicating with staff and students in emergency situations

Keeping your students safe

There are all sorts of emergencies that could occur during school time. Fortunately, while many occurrences are few and far between (e.g. intruder on the premises, local community disaster affecting the school), schools do need to have procedures in place to help them manage the security of their staff and students according to best practice.

What is a lockdown policy?

School lockdown policies have come under the spotlight in the wake of recent terror attacks across the world. When invoked, lockdown policies involve creating a closed space where all external doors and windows are locked to make sure any situation can be contained, as well as prevent people from moving into areas where danger is present. Where appropriate, plans should be in place to bring students who are outside into the school buildings as quickly as possible – as well as alert staff to the activation of the lockdown. Lockdowns can be full or partial to contain threats in one part of the school, if necessary.

Is it compulsory to have a lockdown plan?

Although there are no federal laws requiring all school districts to have emergency management plans, 32 states already have implemented a requirement for schools to have these in place as part of best practice. Guidelines from the Department of Education and State Education Agencies suggest that schools should have a policy in place to ensure the protection of staff and students in an emergency.

How can NetSupport Notify help in a lockdown situation

Desktop notification and alerting tools such as NetSupport Notify can be a vital communication tool during a school's lockdown procedure – and some integrate it as an official part of their emergency plans. With its ability to send messages to Windows, Mac and Linux desktops and large information panels in halls and foyers, it delivers messages instantly. Alerts automatically take screen focus, meaning they can't be hidden or ignored. In addition, you can add sound to ensure attention is gained and ensure that messages are seen and acted upon as quickly as possible – which is crucial in an emergency situation.

What do schools say?

We use NetSupport Notify to provide immediate notification to staff, rather than through 'slower' email methods. **It works very well in our environment.**
Binghamton University, USA

We needed a tool to quickly alert staff and students for fire drills and intruder alerts and **NetSupport Notify fits the bill perfectly.**
Wingspan Care Group, USA

The product is perfect in scenarios such as tornado warnings or snow closures.
Messages are delivered straight to the screen of connected computers so we know the recipient will read the alert straight away."
Parkland College, USA

Try it in your school
