

Desktop Alerting Solution for the corporate sector

V5 out now!

NetSupport Notify is a simple, low-cost, one-way alerting and mass notification tool that enables an administrator to communicate instantly with desktop users or unattended public information displays across any size or type of organization.

From a desktop, laptop, tablet or smartphone, deliver attention-grabbing notifications (that can't be hidden, ignored or saved for later) to selected users/systems, specific departments or all connected users. Alerts carrying varying priorities, customizations, audibility and delivery options can be distributed across the organization in seconds – each with an accurate, real-time record of receipt and acknowledgement.

NetSupport Notify can be installed and operational in a matter of minutes and evaluated within your site via our free 30-day trial download.

Key Features

- Send alerts to Windows, Mac, Chromebooks and Linux desktops
- Send from Windows, Android or Apple iOS device
- Apply priority levels to alerts
- Deliver messages to 10,000 users (including departments)
- Send full screen messages to unattended devices (e.g. digital public information screens)
- Messages can't be skipped, ignored or saved for later
- Customize alerts with your branding
- Include audible alerts
- Support for clickable URLs within alerts
- Real-time message preview
- Hotkey support in 'Emergency Response' scenarios
- Schedule alerts in advance
- Works across multiple networks (send messages to IP ranges)
- Central reporting and tracking
- Restrict access with security codes
- Manage config via Active Directory
- Plus much more!

Corporate Use

Mass notification technology is essential for those instances when all staff need to be informed simultaneously and without delay.

Key Benefits:

Reliable communication

NetSupport Notify provides a welcome backup for existing technology failures (such as e-mail), and an effective tool for delivering staff alerts and guidance such as “The mail server will be off at 5pm” or “We are experiencing difficulties with our file server”.

Boost security

Site administrators and security personnel can use NetSupport Notify to send emergency alerts and notifications to users efficiently. With its notification gateway component, a single message can be delivered to staff across many sites or locations in a single action, again with full delivery/receipt logging and reporting.

Save time

NetSupport Notify allows messages and alerts to be delivered instantly to all computer users while removing the potential delays experienced with emails entering an already busy in-box. The messages can't be skipped or ignored, saving precious time in the case of more urgent alerts. Routine alerts can also be pre-scheduled to occur on a daily, weekly or monthly basis at any given time.
